|  | Rosiland S. Rollins   | 3739                           |  |  |  |
| The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply   |   |                                |  |  |  |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).   |   |                                |  |  |  |

Art Unit: 3739

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maguire et al. (US 6953460) in view of Panescu (US 2003/0078509). Maguire et al. disclose an elongated catheter body having proximal and distal ends and a transducer (1030) mounted at or near the distal end of the catheter body, the transducer having a front surface and an opposing back surface, wherein the transducer is positioned to transmit ultrasound energy toward the tissue facing the front surface but not toward tissue facing the back surface. Maguire teaches all of the limitations of the claims except a sensor for sensing location mounted within the catheter near the ultrasound transducer.

Panescu discloses a similar device and teach that it is old and well known in the art to provide a location sensor to determine the precise location of a device relative to the target tissue. Therefore, it would have been obvious to one of ordinary skill in the art to include the location sensor taught by Panescu on the Maguire et al. catheter so that the precise location of the surgical tool relative to the target tissue can be determined.

## Response to Arguments

Application/Control Number: 10/621,988

Art Unit: 3739

Applicant's arguments filed 3/20/06 have been fully considered but they are not persuasive. Applicant argues that the circumferential ablation element of Maguire is not "positioned to transmit ultrasound energy toward the tissue facing the front surface but not toward tissue facing the back surface". In figure 10 of Maguire, the circumferential ablation element is illustrated as being positioned as claimed. Applicant argues that Panescu fails to teach or suggest a location sensor that senses the orientation of the ultrasound transducer, as claimed in independent claim 1. Panescu teaches the state of the art regarding precise location determination. According to Panescu this process includes coupling a location sensor to a probe and an external antenna generating a field that is detected by the sensor. This process provides information on the precise location. When the precise location determination system of Panescu is combined with the catheter of Maguire et al., the sensor could easily be coupled to the ultrasound transducer, which would indicate the orientation of the transducer.

## Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Application/Control Number: 10/621,988 Page 4

Art Unit: 3739

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rosiland S. Rollins whose telephone number is (571) 272-4772. The examiner can normally be reached on Mon.-Fri. 9:00 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda C. Dvorak can be reached on (571) 272-4764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
